ABPTRFE Madison VA Cardiopulmonary Profile:

<http://www.abptrfe.org/APTA/ABPTRFE/ListingReport.aspx?id=0x010000008e5f9d1d865897fef07ab5743d2a5e8906a8614dd8722633&type=Residency>

Madison VA Cardiopulmonary Residency

<http://www.madison.va.gov/services/pt-2016-residency-20151228121210.pdf>

What do you feel differentiates the Madison VA residency from other similar programs?

- We offer a great opportunity for professional development towards clinical education with the role our resident plays as a teaching assistant for a graduate level physical therapy course.
- We offer a broad spectrum of severity and complexity within our cardiopulmonary patients (Heart and lung transplantation, LVAD, Respiratory failure, heart failure and Early ICU Mobilization) producing a solid foundation applicable in many rehab environments.
- Our affiliation with the University of Wisconsin Children's Hospital allows our resident to experience training in a very specialized Pediatric Cardiopulmonary Population.

Marquette University & Zablocki VA Medical Center Neurological Residency

INFORMATION

Marquette University & Zablocki VA Medical Center Neurological Residency Page

<http://www.marquette.edu/physical-therapy/neuroresidency.shtml>

What do you feel differentiates the Marquette University & Zablocki VA Neurological Residency from other similar programs?

Our residency program provides participants with the opportunity to work with veterans for a year across the continuum of care: from acute and inpatient rehabilitation, to outpatient neuro, including a 4 month rotation through the spinal cord center. Having 3 residents at a time and mentors who have also gone through the residency program provides a natural support system. Teaching opportunities at Marquette and in the community are highly sought after experiences, as are the variety of volunteer opportunities available – see “additional opportunities” for more information.

Gundersen Health Residency

<http://www.gundersenhealth.org/medical-education/residency-programs/sports-physical-therapy>

What do you feel differentiates the Gundersen Medical Foundation Sports Residency from other similar programs?

Our program prides itself on its affiliation with the University of Wisconsin, La Crosse program in Physical Therapy to provide our residents the opportunity to gain experience in teaching entry level DPT students and with the resources available to complete a clinical research project during the course of their residency training. We are currently completing our 20th year of residency education and provide an advanced level of clinical mentoring in all aspects of Sports Physical Therapy.

University of Wisconsin Sports Residency

<http://www.uwhealth.org/health-professionals/internships/sports-medicine-physical-therapy-residency/sports-physical-therapy-residency/37176>

What do you feel differentiates the University of Wisconsin Sports Residency from other similar programs?

Our curriculum is built on the pillars of our 8 specialty clinics – Runners, Cyclists, Swimmers, Throwers, Dance, Golf, Concussion, and Spectrum. Learning experiences with our staff and analyzing movement patterns for these and other activities is an important foundation for learning to be a Sports PT. Additionally, mentoring (both formal and informal) from our faculty, colleagues, and physicians helps accelerate career development.

UW Health Orthopedics Site

<http://www.uwhealth.org/orthopedics/main/31897>

What do you feel differentiates the University of Wisconsin & Meriter Residency from other similar programs?

The collaboration among academic teaching hospital (UW), community hospital (Meriter), and private practices (Advanced, New Life, and Sports & Spine) allows residents to investigate many different aspects of patient management, but also administration of physical therapy services. Our faculty and mentors are involved in the APTA from local to national posts providing residents additional opportunities for professional development. As a program that has been accredited for 15 years, we have many past residents who are involved in teaching, mentoring, and leadership within our program.

Bellin Health Orthopedic Physical Therapy Residency Program in Partnership with Evidence in Motion

Bellin Program Site

https://www.bellin.org/services_programs/therapy-services/professional-education

What do you feel differentiates the Bellin Residency Program from other similar programs?

Bellin's residency focus is on rapidly developing entry-level therapists to become skilled, proficient and independent Doctors of Physical Therapy working on their quest to become a master clinician. By the time they have completed the residency they will be significantly farther ahead than their peers at a similar time frame in the skillful implementation of evidence based practice and clinical reasoning including consistent use of manual therapy in treating a wide range of orthopedic conditions.

Bellin's residency and fellowship program is led by a team of Fellowship-trained therapists, one of which is dedicated to clinical quality and our residency. At a minimum, Bellin has four individuals completing the residency or fellowship training on a continual basis (new residents and current employees). Further, we employ over eleven individuals that have completed formal residency or fellowship training, a number that continues to grow annually. Finally, Bellin implements a development program for all of its employees based around a consistent clinical framework. The outcome is a clinical culture of excellence that is the expectation for all, not the exception. Residents are immersed in this culture.

As is the case for all residencies, all mentors are OCS board certified. We currently employ 13 board certified therapists (OCS and SCS). The difference at Bellin is that most have also completed Bellin's residency or Fellowship program. This leads to quality mentoring that is second to none. We also employ four current Fellows of the American Academy of Orthopedic Manual Physical Therapy and one Fellow in training, all of which take an active role in mentoring our Residents.

As a Bellin resident you are full time employee of Bellin Health. This means you collect full time benefits including health insurance, paid time off, 401k and other benefits.

The Bellin residency starts during an accepted applicant's final semester of school which allows the entire program to be completed one year after graduation, which is a feature very unique to our setting. Upon completion you are ready to sit for and pass the APTA OCS exam.

Specialized Physical Therapy Education (SPTE)

INFORMATION

Residency Director: Matt Haberl, DPT, OCS, ATC, CSCS, FAAOMPT

Program Director: Paul Reuteman, PT, DPT, OCS, ATC

- ✦ Beaver Dam Community Hospital, Beaver Dam, WI
- ✦ Contact SPTE for other clinics in development or to set up a partnership

PROGRAM DETAILS

Number of Residents Annually Accepted: 5-10

New Graduates Accepted: Yes

Experienced PTs Accepted: Yes

Start Date: July

Length of Program: 12-18 months

Application Due Date: Dependent upon clinical site

Cost of Program: ~\$10,000 Tuition, mentorship, shared cost or reduced salary options which is dependent upon each clinical affiliation agreement and resident agreement

Resident Compensation: See Cost of Program

Clinic Caseload: 0.75-1.0 FTE- Dependent upon resident and current employer

Additional Experiences: SPTE encourages each individual to be active within their facility, organization and community by building relationships with area medical providers, community programs and developing each resident's personal strengths for life long professional development. Residents often take entry-level students to develop their clinical teaching skills and get involved. Residents are encouraged to continue on after residency graduation as clinical mentors, faculty as well as options to teach both in our distance education courses and hands on courses as a part of the SPTE family.

LINKS

SPTE Site

www.specializedpteducation.org

What do you feel differentiates SPTE from other similar programs?

SPTE prides itself on developing clinical partners to improve the access of orthopaedic residency education in the greater Midwest area. Our multi-site program assists independent clinics and facilities in creating a traditional style residency program for continued staff development to provide collaborative care and communication. Here residents have the opportunity to work with residents from a variety of environments while still receiving the most up to date clinical evidence and skills through top notch mentorship and educational opportunities. Come be a part of the SPTE family today!

What do you feel differentiates EIM from other similar programs?

What sets EIM apart is threefold: Faculty, Approach, and flexibility.

EIM's prides itself on associating with the content experts in our field. Rather than being limited to learning from only a few individuals within your residency organization, EIM connects its learners with the experts in the field. We have more than 50 faculty who teach for us, so you are always guaranteed to learn from the best there is. You will also have different faculty for each course. For example, the Radiology course is taught by Mike Ross (former JOSPT MSK Imaging Editor) and our Fellowship Clinical Decision Making course is taught by Barb Stevens and Tim Fearon, Master clinicians who trained with Geoff Maitland. Some of our other distinguished faculty are Tim Flynn, John Childs, Rob Wainner, Julie Whitman, Bob Boyles, Mike Walker, Paul Mintken, Jason Rodeghero, and the list goes on. I do not mean to name drop here, but these faculty are the life blood of EIM and are all humble in their own respects and all have a passion for teaching and moving the profession forward.

The second is our approach, which is largely eclectic. EIM believes that manual therapy should and needs to be taught to the masses. It is not something that should be placed on a pedestal and reserved for only the elite. Our approach is evidence based and founded on Maitland principles, however, it incorporates and borrows from many other schools of thought including MDT, Mulligan, Gibbons and Teyhen, etc. This way you will be a well-rounded clinician.

Last, it is our flexibility. Our programs are 80-90% online and allow our students to live, work, and learn in a location of their choosing. We have Weekend Courses around the country for the hands-on lab portion, so there is always a location relatively close by. The on-line learning is interactive and engaging and truly practice changing. Not only are you learning from a world-class faculty but you are also learning from other colleagues from around the country. It is a really cool thing to see our students create bonds with other clinicians from around the country.
